

Geology and Groundwater Resources
of the Prince Albert Area (73H),
Saskatchewan

Map 3 Interglacial Sands and Gravels

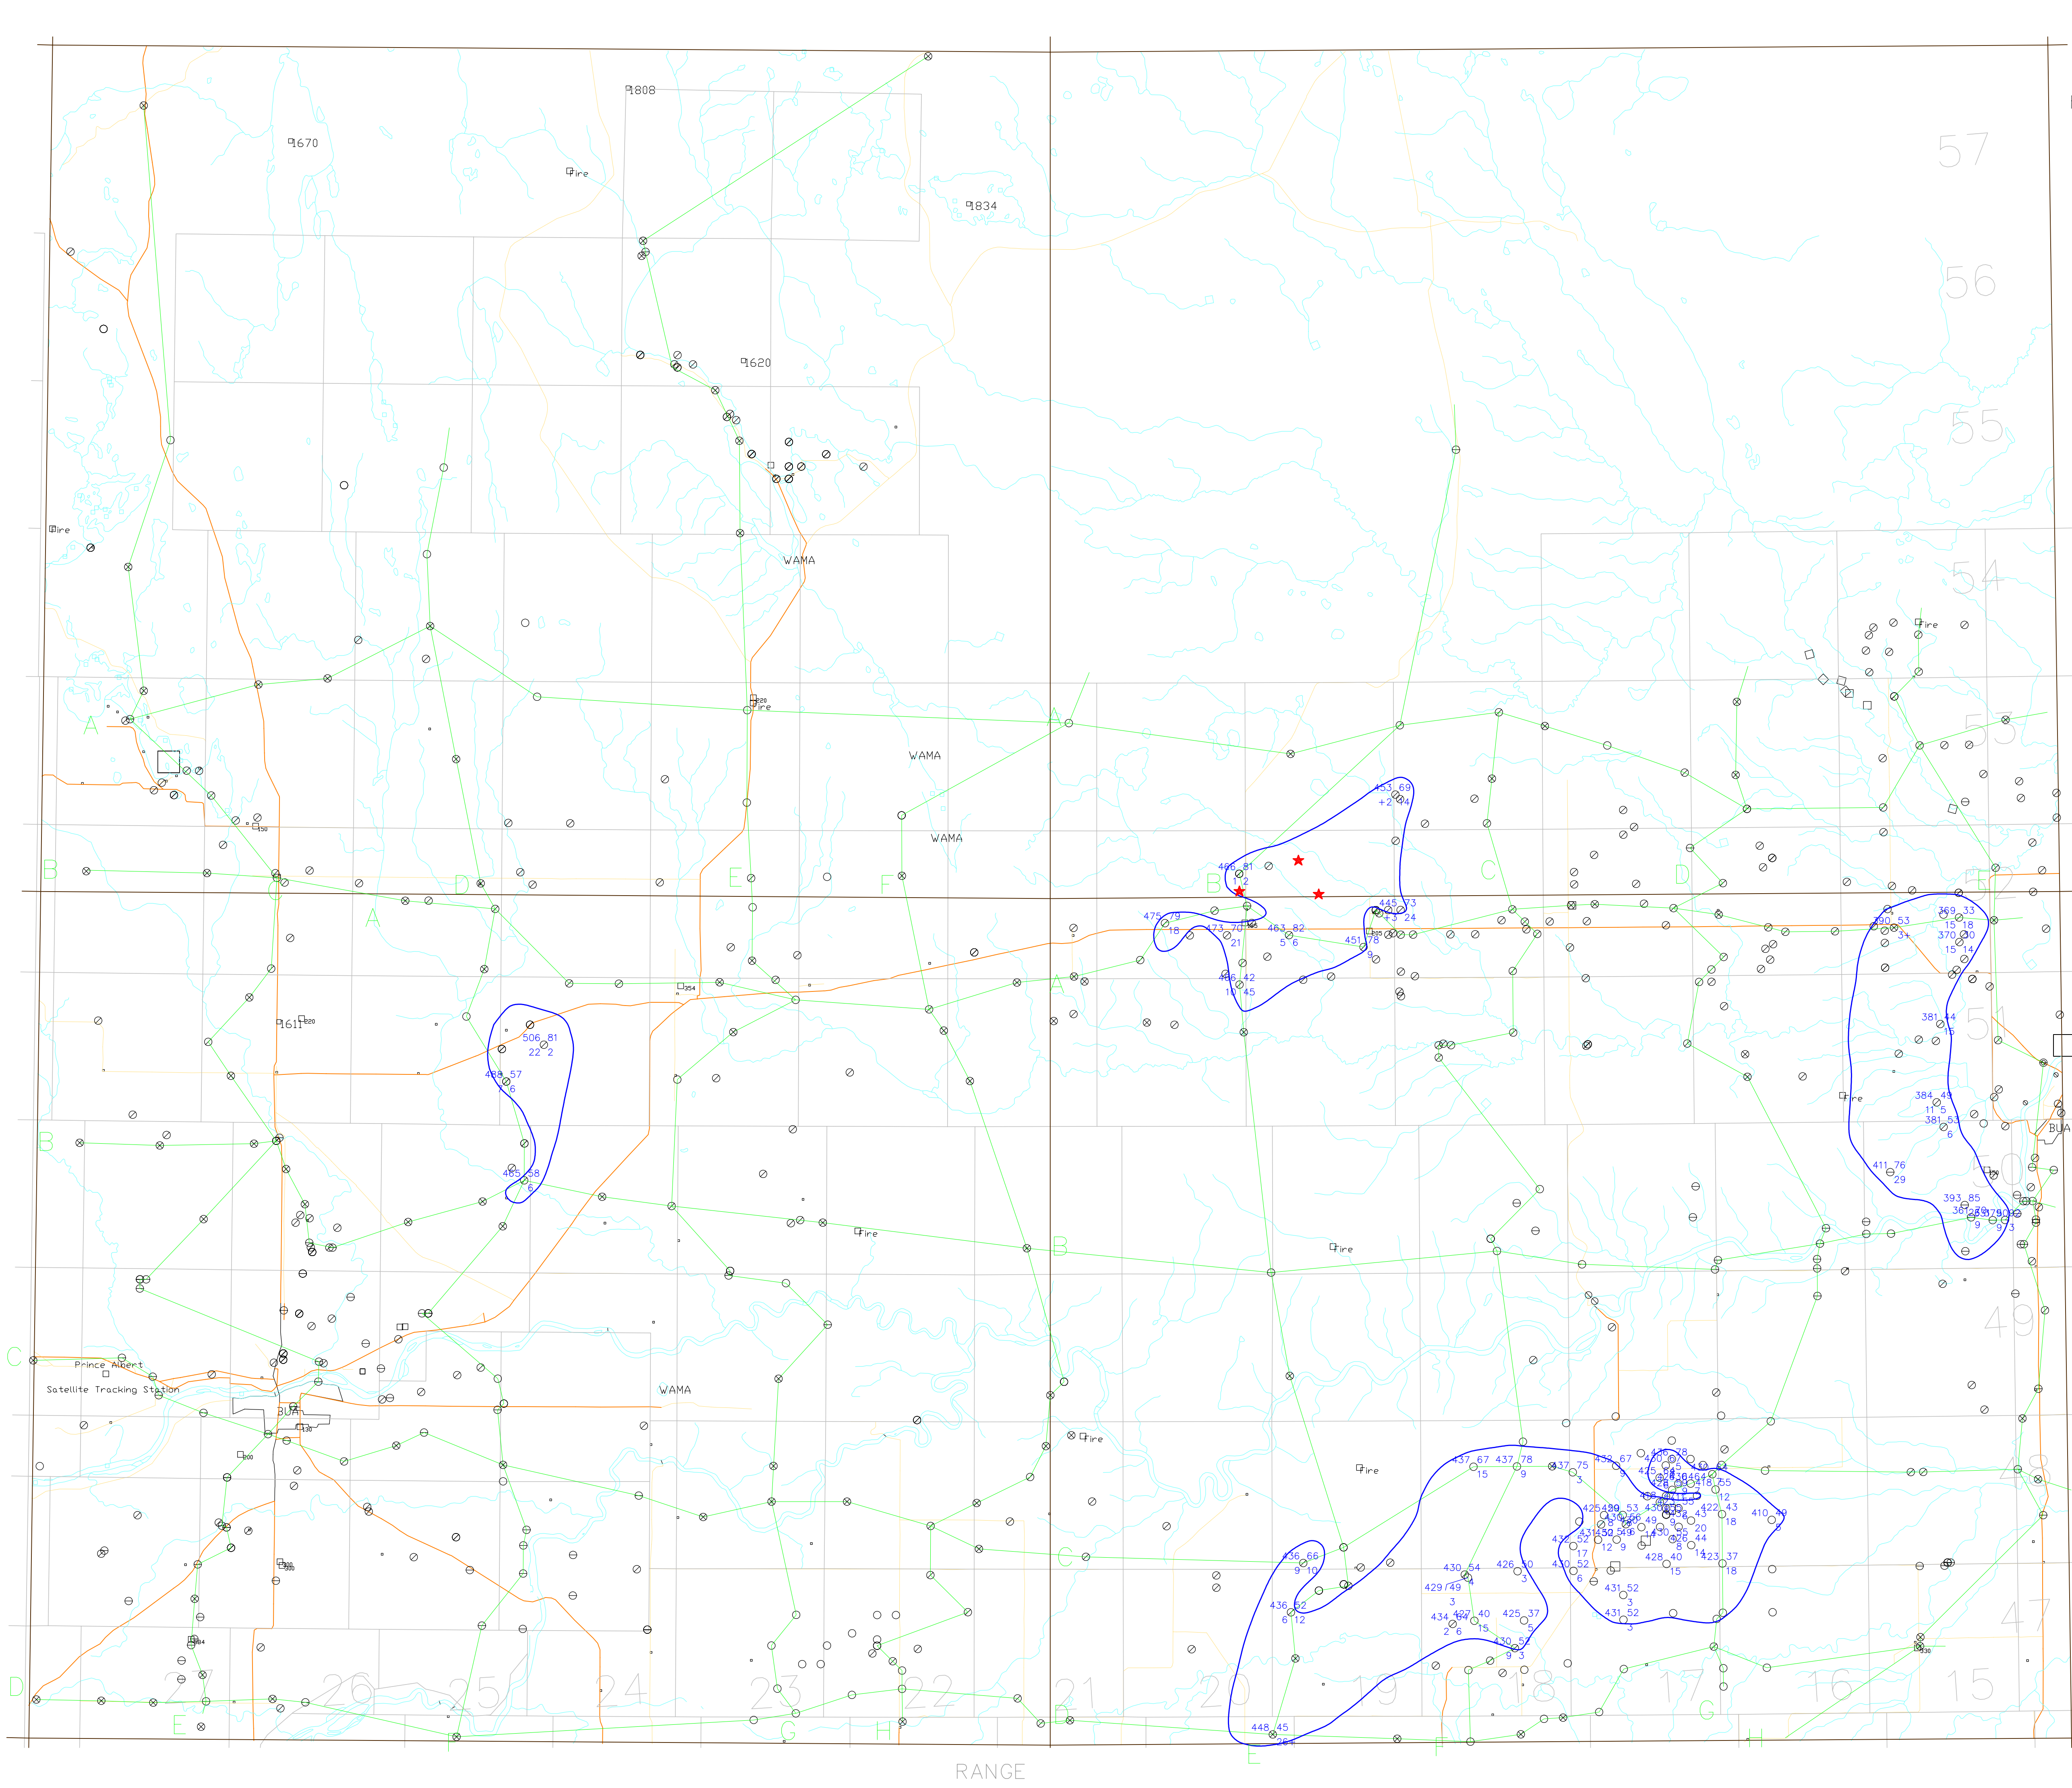

Stratified intertill deposits

Depth to water Depth to top
Thickness
(all units are in metres)
(depths are below ground surface)

LEGEND

Cross Section

- E-log only
- E-log, geologist description
- E-log, driller's log
- Driller's log only
- Flowing well/testhole

This document may not be copied without the consent of the authors. However, copies may be made, except for resale, for personal or internal use of the client, provided the original publication is cited where applicable.

These maps are accompanied by a series of cross sections which depict the subsurface units along the transects shown on the map. The maps and cross sections are representations of the data taken from the testholes and wells indicated on the maps. The boundaries outline areas in which the aquifer or geologic unit is likely to be found. Aquifers and other geologic units may not always occur continuously within the areas shown, may not be found at a specific site or may occur at elevations other than those indicated. Discontinuous water bearing zones may be found outside the boundaries shown.
